Adventures in Addressing

The development and maintenance of an understandable and consistent addressing system is a complex process. Addresses are used for locating a home, mail delivery, utilities, voting, allocation of local, state, and federal funds, and emergency response.

It is one thing if the pizza delivery has difficulty locating an address, but with emergency response a life may be on the line. Disparate addressing practices, poor address quality, funding, and lack of understanding all lead to poor addressing. This class will outline key issues, solutions, and best practices related to good addressing, while sharing insights, tips, and lessons learned.

E9-1-1: It's All About Location

Accurate locations are paramount to getting the right emergency responders to the correct location in a quick and efficient manner. Errors and discrepancies exist in all data and must be minimized for public safety and emergency response.

The same data used by 9-1-1 and emergency response can be used by many others.

Addressing Strategies for Success

Many public and private entities can benefit from a well-conceived addressing system that involves cooperation, sharing of resources, and forming alliances. The addressing system must be easily understood, accepted and used by everyone.

Any successful addressing system must include the cooperation of all stakeholders and the United States Postal Service (USPS). A strong maintenance program is also essential for maintaining the integrity of the addressing system.

Even though the class is free we need to know how many are attending. Please fill out the registration form on the Public Safety website: www.okpsc.org
